Business Continuity Planning Guide

A Disaster Protection and Recovery Planning Toolkit for Small to Mid-Sized Business

Together We're Ready
Know • Plan • Prepare

Table of Contents

A message from the Executive Director

Welcome to *Open for Business™*, a tool that puts at your disposal the disaster planning and recovery expertise of the U.S.-based Insurance Institute for Business & Home Safety (IIBHS). *Open for Business™* is a registered trademark of the Institute for Business & Home Safety and is used under license by the Institute for Catastrophic Loss Reduction (ICLR).

Your interest in this publication clearly reflects the stake you, your family, your employees and even your community have in your business. You've worked hard to get the business where it is today, and you want to do everything you can to protect it from risk.

ICLR—an independent, not-for-profit research institute created by Canada's home, car and business insurers—has brought to Canada, through an agreement with IIBHS, the *Open for Business™* disaster planning toolkit designed specifically for small to mid-sized businesses. The threat of a disaster-related closure is especially great for these businesses because they usually lack the financial resources for recovery, the ability to spread their risk across several geographic locations, ready access to alternative suppliers and other advantages that most large organizations possess. Large firms also have an advantage by possessing the resources and expertise necessary to engage in professional disaster and recovery planning.

Thanks to *Open for Business™* your firm can follow many of the disaster planning and recovery processes used by much larger companies. But, as you will see, you won't need a large company budget to accomplish the planning and protection basics. You'll also find that ease of use is a key feature of *Open for Business™*. There is no need for you or your staff to have a background in construction, risk management, property protection or business continuity planning.

Each year disasters such as floods, hurricanes, tornadoes, and wildfires force thousands of businesses to close. But even more common events, such as building fires, cause the same result. But you can stay *Open for Business™* with advance planning and the right tools.

We hope you find *Open for Business™* to be a valuable tool to protect your business, your employees, your customers—and your family— from disaster loss.

Sincerely,

Paul Kovacs
Executive Director

Institute for Catastrophic Loss Reduction

Forward

Disasters, by their very nature, are highly unpredictable and it is impossible to fully anticipate every situation and loss that may occur should one strike. Similarly, every business faces unique risks and challenges, and plans and techniques that work well for one business may not work for another. Even so, IIBHS believes that thorough, well-considered planning can reduce the risks any business might face and the losses it might suffer should a disaster strike. For that reason, we work to assemble experience and materials to assist businesses in developing customized disaster preperation and recovery plans.

Please remember that no plan can be perfect. However, we believe that such preparation can reduce your risks and position your business to better resist the devastating ramifications of a business interruption. We hope this toolkit, and our other materials and resources, will help facilitate that process.

Safeguarding Your Investment

You have invested significant time and resources into making your business work. You have a dedicated customer base. You have a good reputation for paying your suppliers and providing your goods and/or services efficiently and quickly. You are a member in good standing of your local business community.

Now imagine all you have worked to create literally goes up in flames. Or that your business is hit by a flash flood or an interior pipe breaks, leaving valuable electronics and client records ruined by water damage. If an earthquake hits, would you be able to pick up the pieces? The threat of these and other natural disasters leave you vulnerable to having all of your efforts simply "blown away."

Images of devastation left behind by severe weather events are difficult to ignore. Still, many people have difficulty believing it can happen to them. Every year, rivers spill their banks, high winds tear away roofs and power outages leave communities in the dark.

In January 1998, a massive ice storm hammered eastern Ontario, southern Quebec and Atlantic Canada, triggering total insured losses of $1.82 billion (2002 dollars). The disaster negatively impacted businesses of all sizes, as electrical power was unavailable for more than 30 days for some. Millions of litres of milk were dumped as farmers couldn't get their product to market, and thousands of heads of cattle, chickens and other farm animals died. The Quebec maple syrup industry was devastated due to the loss of large numbers of Sugar Maples. But the impact on business was not limited to rural areas, as a large area of Downtown Montreal was cordonned off due to large chunks of falling ice. Many businesses of all sizes had to close for a week or more. Others that were able to remain open experienced a sharp drop in the number of customers, and many employees couldn't make it in to work due to transportation problems and commitments at home. The event remains the most costly natural catastrophe in Canadian history.

A few years later, on the other side of the country, the problem was with fire, as the summer of 2003 marked a record year for forest fires in British Columbia. Over 2,500 blazes swept more than 260,000 hectares of wildlands in the province that year. The annum also goes down as having the greatest number of interface fires, where wildland blazes meet developed areas. More than 45,000 people were evacuated because of such fires. All-in-all, the blazes destroyed 334 homes and many businesses, triggering insurance claims exceeding $200 million.

The same year, Hurricane Juan rolled ashore in Nova Scotia just after midnight, September 28, 2003. The 10th named storm and sixth hurricane of the 2003 Atlantic hurricane season lashed the Halifax-area with 160 km/h winds and gusts of up to a reported 230 km/h. The blast rapidly moved northward bisecting Nova Scotia and entering Prince Edward Island as a tropical storm, causing widespread damage. Millions of trees were lost and damage was reported to pleasure craft, marinas, docks, seawalls and breakwaters. It took up to a week and a half to restore power to the hardest hit areas of Nova Scotia.

It also pays to understand the important role maintenance plays in keeping a business operating. But even the most diligent business owner can open the door to find that a burst pipe—caused by freezing weather or simply failure—has destroyed or damaged valuable inventory and the interior of the building.

Disasters of all types can threaten businesses regardless of location. By following the recommendations in this kit, you can improve the chances of avoiding a closure that will cost both time and money. You will also increase the odds of staying in business should the worst happen.

Take a few minutes to do the following self-assessment, to see how well prepared you are for a major business interruption, whether triggered by a natural hazard or human-caused event.

Open for Business™ Self-Assessment

Are you concerned that your normal business operations might be
interrupted by a natural or human-caused disaster?   ❐ Yes ❐ No ❐ Unsure

Have you determined what parts of your business need to be
operational as soon as possible following a disaster, and planned how
to resume those operations?   ❐ Yes ❐ No ❐ Unsure

Do you have a disaster response plan in place to help
assure your employees' safety and take care of yourselves until help can arrive?   ❐ Yes ❐ No ❐ Unsure

Could you communicate with your employees if a disaster happened
during work hours or after work hours?   ❐ Yes ❐ No ❐ Unsure

Can your building withstand the impact of a natural disaster, and are your
contents and inventory sufficiently protected so they will not be damaged?   ❐ Yes ❐ No ❐ Unsure

Are your vital records protected from the harm that could be caused
by a disaster?   ❐ Yes ❐ No ❐ Unsure

Are you prepared to stay open for business if your suppliers cannot
deliver, your markets are inaccessible, or basic needs (e.g. water, sewer,
electricity, transportation) are unavailable?   ❐ Yes ❐ No ❐ Unsure

Do you have plans to stay open for business, even if you cannot stay
in or reach your place of business?   ❐ Yes ❐ No ❐ Unsure

Have you worked with your community (public officials and other
businesses) to promote disaster preparedness and plan for
community recovery?   ❐ Yes ❐ No ❐ Unsure

Have you consulted with an insurance professional to determine if
your insurance coverage is adequate to help you get back in business
following a disaster?   ❐ Yes ❐ No ❐ Unsure

Self-Assessment Results

Your score indicates how well prepared you are for the disruption caused by
a natural or human-caused disaster.

7 – 10 Yes: You are well on your way.

4 – 6 Yes: You have lots of work to do.

1 – 3 Yes: You should get started immediately.

Continue through Open for Business™ *to*

- Create a business continuity plan to resume essential business operations.
- Evaluate the exposure of your building and contents to damage caused by natural hazard events.

Getting Started

Open for Business™ focuses on two categories of protection to help you survive a natural disaster:

- Your business continuity plan
- Your property protection plan

What Your Plan Will Include

Business Continuity Plan
The business continuity plan is composed of 13 key forms for you to complete. These forms are divided into three subsections: Contact Information, Business Operations and Office Setup.

The information you record will help you recover your essential business functions and inform individual employees about their responsibilities.

Property Protection Plan
The property protection checklist focuses on the natural hazards of wind (hurricanes, high winds, tornado/hail), flood, earthquake, freezing weather and wildfire. It covers the building structure, the building interior, and exterior components and surroundings. Whether you own or lease your building or office space, you can use the checklist as a guide to make decisions about where you will rent or buy property, and how you expect it to be maintained or improved/upgraded.

Choose Your Team

Before you proceed, decide who is responsible for the development, maintenance, updates and testing of your plans. Also, decide if you would like others to work with you.

- If you are a one-person operation or have a couple of employees, you may choose to do the plan yourself.
- If you have 5 – 10 employees, you may ask one or two of them to help you.
- If you have more than 10 employees, you may want to form a team, perhaps with representatives from each department.

Others who might help you with your plan are your accountant, attorney, payroll company, human resources contractor or other individuals and companies that are knowledgeable about your business.

If you decide to create a business continuity plan for each department, be sure your team meets to discuss, coordinate and reach consensus on a company-wide plan. Or designate one person to review the combined plans for consistency and duplication of content. However you decide to organize your team, the most important thing you can do is to compile the necessary information. Then you can resolve any overlaps in the plan.

Select someone knowledgeable about the building characteristics to complete the property protection checklist.

How to Protect Your assets

It is critically important to protect your base assets   your place of business, your contents and inventory, and/or your production processes   with adequate insurance.

Review your current policy with your agent, broker or insurance company. Most policies do not cover flood or earthquake damage and you may need to buy separate insurance for them. Be sure you understand your policy deductibles and limits.

Consider business interruption insurance. Even if you have to close your doors for only a few days, the impact on your revenues and net income can be substantial. Don't assume your business will snap back to its previous revenue level as soon as you reopen. While you are closed to customers, they may go elsewhere and they may take their time finding their way back to your business again. And as your revenues decrease, you will have both ongoing and new expenses. This combination can be impossible to handle without business interruption coverage. Your insurance agent/broker/ company will work with you or your accountant to estimate your projected revenues and expenses, calculate anticipated income and then determine the potential losses from a temporary closure.

Even if your basic policy covers expenses and loss of new business income, it may not cover income interruptions due to damage that occurs away from your premises, such as to your key customer or supplier or to your utility company. You can generally buy this additional coverage and add it to your existing policy.

Although insurance can help protect your assets, it alone cannot assure the post event viability of your business. Without a pre defined plan to protect people and property, and to resume business operations in the larger community context, most organizations find it very difficult to survive a business outage.

Protecting Your Critical Resources

When you think about the impact natural or human-caused disasters can have on your business, consider your most important resources:

Human Resources

If you are the sole proprietor of your business, then you obviously need to protect yourself and your customers from possible injury in the event a disaster occurs. In small and mid-sized businesses, you need to protect your employees and customers from injury on your premises. You also have to consider the possible impact a disaster will have on your employees' ability to return to work and how your customers can reach you or receive your goods and/or services.

Physical Resources

Whether you own or rent the building that houses your business, you and/or your building manager should inspect the physical plant(s) and assess the impact a natural disaster would have on your facilities. The property protection checklist can serve as a guide for that inspection.

If your business operates in an older building, consider having it evaluated by a professional engineer. An engineer's recommendations will help you safeguard your building from potential hazards. Keep in mind that an ideal time to make improvements is during a major addition or renovation.

Whether you are planning to remodel your existing building or build an entirely new facility, make sure your plans conform to local building code requirements. These codes reflect the lessons experts have learned from past catastrophes. Contact your local building code official to find out what is required for your project.

If you do not own the building that houses your business, this is still important information for you to keep in mind if you are relocating to a new facility or expanding your business operations. The building's physical condition and how it will survive a natural disaster could have an impact on your ability to keep your business open following an incident.

Business Continuity

Even if your business escapes a disaster unharmed and your employees are unhurt, there is still a risk that the business will suffer significantly in the form of **upstream** and **downstream** losses.

When some local businesses fail, there is a chain reaction because of the negative impact on the local economy. This guide will outline the steps you can take to assess risk and protect your assets from these disturbing possibilities.

Upstream losses are those you will suffer when one of your suppliers is affected by the disaster and cannot deliver the goods or services your business needs. Most businesses depend on daily deliveries, such as bread to a restaurant or machine parts to a manufacturer. If the supplier's building is damaged by the disaster and he cannot keep up his pre disaster schedule, this upstream loss will affect your firm, even if it's undamaged.

Downstream losses occur when a key customer and/or the lives of residents in your community are affected by a disaster. For example, if everyone in town is digging mud out of buildings and cleaning up debris after a flood, a theater likely won't have many customers. If supplying a component to a large factory is a major source of your firm's cash flow and that factory is closed due to tornado damage, your business will suffer a downstream loss even if it escaped unscathed from the disaster itself.

Developing Your Business Continuity Plan

A small investment of time could go a long way toward averting a serious disruption caused by a natural or human-caused disaster.

Even the best-designed and well-maintained buildings can be damaged, forcing a business closure. And even if a building sustains no damage, a major hurricane, earthquake or other catastrophic event can close roads, cause power outages or create other problems that force a business to close. This is why every business needs a continuity plan to get up and running as quickly as possible in the event disaster strikes.

The business continuity forms provided herein are designed to help lead you to an understanding of ways to avoid or minimize downtime in the event of a natural or human-caused disaster, as well as to give you a recovery strategy and repository of important recovery information.

Open for Business^{TM} includes 13 forms which, when completed, will provide you with the basics of a customized business continuity plan. Before you start, gather the information you will need to complete the individual records for each form.

You will start by recording the following:
- Employee (including owner)
- Suppliers/Vendors
- Key Contacts

You will then identify:
- Critical Business Functions
- Recovery Location

Critical business functions are those that are crucial to your survival and to resumption of business operations. Using the records you completed for the first three forms, you will select the employees, suppliers/vendors and/or key contacts you need to fulfill these business functions.

You will fulfill these business functions at your recovery location, whether it is an alternate site, shared space with a similar business, your home, or if you are location dependent, your primary place of business.

The next four forms contain items that are needed to perform your essential business functions at your recovery location:
- Vital Records
- Critical Telephone Numbers
- Critical Supplies
- Equipment/Machinery/Vehicles

You will list which business function or functions are associated with each vital record, critical telephone number, supply or piece of equipment, so that the people responsible for that business function have everything necessary to get the work done.

The following three forms contain items that all employees at the recovery location will use:
- Computer Equipment and Software
- Voice/Data Communications
- Miscellaneous Resources

The final form is a checklist of items to help assure the safety and well being of employees and others on the premises while waiting for help to arrive following a disaster:
- Disaster Response Checklist

The Business Continuity Forms —
Things To Consider

- Download and save a blank electronic copy of each form from http://www.ICLR.org so you can duplicate it as needed.
- Save completed forms in more than one medium,e.g. a paper copy and an electronic copy stored on your hard drive or network.
- Store completed forms in several locations, with at least one copy well off site and within reach day or night.
- If you make changes, be sure to discard older copies.

Your business continuity plan works best when it is *realistic, up to date, tested and revised as needed*. It must be well known by those responsible for implementation, possibly in the midst of post emergency chaos.

The following is some guidance to help you as you fill out the forms:

Employees Form

You will use this form to gather information on each employee (and the business owner) so each person can be contacted 24 hours a day. After you have entered all your employees, assign a number to each in the "Call Order" field so that employees are called in the desired order. Maintain an up-to-date copy of phone numbers in an accessible and secure location.

As an employer, you want to know whom to contact should any of your employees become injured or fall sick on the job. This information is equally important for notification of their families if your employees cannot leave the workplace following a disaster. With this information, you will also be able to contact employees at all times to inform them about the status of the business operations, where to report and what to do following a disaster.

The person designated as "1" should be responsible for the phone tree and any distribution of responsibility for calls by fellow employees. You can always return to each record to enter or change the "Call Order" number.

Since your business cannot resume operations unless employees are able to return to work, you might want to consider:

- Alternate forms of transportation for employees (e.g. carpooling)—determine if any employee has four-wheel drive or a van that could be used;
- Provision of emergency housing for displaced employees;
- Addressing immediate needs of your employees, including short-term financial aid;
- Childcare at your primary or alternate site (be sure to plan ahead with public officials to meet any regulatory requirements).

Payroll continuity is key to continued loyalty of your employees. It helps them handle disaster-related problems at home and meet their personal financial obligations. You may want to establish a company-wide policy for:

- Direct deposit of paychecks for all employees;
- Overtime pay during disaster;
- One week's pay (or other amount) even if your business is not operational.

Plan ahead if you know you will have to deal with security/access issues for your primary or alternate site. If employees need badges or security clearances, be prepared to provide them.

If your employees need special licenses for their work, e.g. to move or operate equipment, be sure you have a system in place to obtain or replace them.

Meet with your employees at least once a year to review emergency plans and to share information on disaster preparedness and protection at home. Find out if any of them has certification for first aid, CPR or as an Emergency Medical Technician (EMT), or if anyone is a ham radio operator. All of these skills could be useful in emergencies. Supply employees with a wallet card detailing instructions on how to get company information in an emergency situation, including telephone numbers for easy reference.

Suppliers/Vendors Form

You will use this form to record information about your current suppliers and ones you could use as an alternate choice.

Disaster-induced operational problems are not always connected to property damage. They include disruptions in the flow of supplies and in the ability to ship goods or deliver services.

Your ability to resume operations relies on the ability of your suppliers to deliver what you need on time. To encourage the continuity of the supply chain, there are several things you can do:

- Be sure your principal suppliers, or alternate suppliers, are not all in the same geographical location as you.
- Ensure that your pre-qualified, critical suppliers of services and materials will be available to you when you need them. This could include requesting or requiring that a critical supplier have a mutual aid agreement in place with a similar company to fulfill its commitments, should its normal business functions be interrupted.
- Establish a notification list and procedures for notification.

Take care of credit checks, purchase accounts and other vendor requirements in advance so the vendor can ship replacements immediately.

- Have back-up vendors and shippers in place in case your primary ones are disabled.
- Establish relationships in advance and maintain them.
- Place periodic orders so they consider you an active customer when you need them.
- List suppliers/vendors you can use for your miscellaneous needs at a recovery location, such as office supplies, furniture, etc.

Require, or encourage, your suppliers to have business continuity plans. You may want to audit them yourself to ensure they are current.

Key Contacts Form

You will use this form to list your key contacts for administration of your business, emergency response and resumption of your critical business functions. Key contacts include your most important customers.

Key contacts consist of those you rely on for administration of your business, such as your bank, creditors, insurance agent/broker/company, accountant, etc. They also include services in the community you need to help you resume operations, such as utilities, emergency responders, media outlets, business partners and business organizations.

You should have a well-established liaison with municipal authorities, utilities and other service providers before disaster strikes. The effectiveness of this liaison may be enhanced if a business group coordinates it for multiple businesses.

Your key customers are an essential part of this list (*see note, next page), as your economic recovery depends on keeping your customers or clients, or adapting to the changed environment to establish new customers.

You need to determine:

- What happened to my customers/clients?
- Were they affected by the disaster?
- Will their buying habits change? Your product or service may be a discretionary purchase or not essential at the time.

If you cannot meet your customers' needs due to your own business interruption, or if they can easily replace your product or service elsewhere, you may lose customers or clients. This highlights the importance of communication before a disaster to build customer loyalty and to inform them about your preparedness for a disaster.

After an event, it is important to keep customers or clients informed about the status of your product or service, delivery schedules, etc., or to develop mutually agreeable alternative arrangements. You could include this communication strategy within one of your *critical business functions*, e.g. *Communications – External*.

You may choose various ways to communicate with your key customers after a disaster, depending on what modes of communication are available. These include, but are not limited to: direct telephone calls; a pre-arranged toll-free number for incoming calls; e-mail, or announcements by radio or through a newspaper.

Note: If you have more than 20 key customers, you should include a list of them as one of your Vital Records. Nevertheless, you still may want to include some of your major customers or clients in Key Contacts, as they could be involved with one or more of the critical business functions you identify for your recovery plan.

Business Functions Form

You will use this form to identify what business functions are critical to your survival and the details about each function. In "Priority," indicate whether the business function has high, medium or low priority.

Whatever the cause of your business interruption, your ability to address the consequences could make the difference between survival and closure.

You need to determine the maximum length of time that your business can tolerate being down after a disaster occurs.To help get you started, the following are some key questions to ask yourself:
- What are my most critical and time-sensitive business functions?
- What functions would I classify as highest priorities? Medium priorities? Lowest priorities?
- How much downtime can I tolerate for each business function?
- Which business functions are necessary to fulfill my legal and financial obligations and maintain cash flow?
- Which business functions are essential to maintain my market share and reputation, or to strategically adjust to changed circumstances?

Some time-sensitive and critical business functions

Administrative functions:
- Recovery location set-up
- Payroll
- Insurance Claims (filing your claim, following up)
- Regulatory Requirements (e.g. time-sensitive reports)
- Debt Obligations (bills due)
- Accounts Receivable
- Communications
  – Internal (e.g. with employees and Board of Directors)
  – External (e.g. with suppliers/vendors and key contacts such as media, customers)

What is your core business? What are the time-sensitive and critical business functions that are specific to your business?

Another way to think about your key business functions is to ask yourself, "What if I lose or do not have access to my. . ."

- facility/buildings
- contents/inventory
- people (employees, customers/clients)
- vital records
- equipment
- utilities
- support systems (computers/networks, communications, transportation)
- suppliers

What would be the consequences of the loss of any of these resources? What are the alternatives to help me survive and remain viable?

Recovery Location Form

You will use this form to provide information on your recovery location, that is, where you will conduct business operations following an event.

Ask yourself whether you could: recover from an alternate site or even out of your home temporarily, establish a mutual aid agreement with a similar business, or rent available space at another location if your business location is unusable or inaccessible.

Do you have other facilities or branch offices where you could resume some or all of your operations? What arrangements will you have to make ahead of time to utilize one or more of these locations?

If you are location dependent, do you plan on resuming operations as soon as possible from your primary site?

As you select your recovery location:

- Consider a site that is not on the same electric power grid.

- Factor in the ability of your vendors/suppliers or rental companies to quickly transport critical items such as computers, inventory and equipment to your recovery location.
- Keep an extra supply of any hard-to-replace parts or essential supplies on hand, and consider storing them in a place that is not vulnerable to the same disaster as your primary facility.
- Work with vendors/suppliers in advance to assure a secure and adequate supply of what you will need.

If you hope to retrieve items from or recover at your primary location, plan ahead for any special security/access control procedures, such as badging. Leave keys and alarm code(s) with a trusted employee or friend, in case you may not be able to get to your business quickly after an emergency.

If your business site suffers damage, you may need to contact an industrial clean-up service and/or a security service to protect your property. Be sure to consult with your insurance agent/broker/company about proper steps and documentation requirements.

If you rent your primary location space, review your lease for disaster provisions, including who is responsible for what in case of damage from a natural disaster. You may want to add a clause that allows you to get out of the lease in 30, 60 or 90 days if damage is not repaired satisfactorily to the leased property or to adjoining properties on which you count to bring business to you.

Note: If you have not secured a recovery location at the time you are starting to develop this business continuity plan, continue on with the planning process. You can still select which staff will be assigned to the recovery location and which business functions will be performed there, and then move on to the following forms. When you have finalized all arrangements for the recovery site, return to this record and enter the name and address of the location

Vital Records Form

You will use this form to identify records that are vital to perform your critical business functions. Use "Media" to indicate if the record is a print copy, on a CD-ROM, etc.

Your business cannot operate without its vital records and critical information. The following questions may help you determine what records need to be backed up on one or more "media" and maintained off site and/or in storage:

- Is the record required for business success?
- Is it required for legal reasons?
- Is it required by a regulatory agency?
- Is it required to support recovery efforts?

If you answered YES to any of the above, then answer the following:

- Is it impossible to re-create?
- Are copies unavailable at a remote location?

If you answered YES to either one of the last two questions, consider the record vital. It should be duplicated and included in recovery inventories.

If you answered NO to all of the above, then the record is not considered vital and should not be included in recovery inventories.

Examples of vital records include employee data, payroll, financial records, strategic plans, production records, customer/client/patient lists, inventory lists, building plans/blueprints, the lease, insurance records, and research data. You can determine which of these records are necessary to continue performing the critical business functions you have identified. You will likely identify other vital records that are particularly critical to your business' survival.

Store a copy of all vital information on site and a second in a safe off-site location (some experts recommend at least 40 kilometres away). Make it a critical part of your routine to regularly back up your vital records and other information upon which your company's success depends.

Keep your inventory list current and make a photographic or videotaped record of your inventory.

To help support insurance claims, you will need:

- Historical sales records.
- Income and expense information as shown in recent profit and loss statements and/or income tax returns, as well as recent financial audits.
- Other business records that could assist in projecting what your profits would have been had your business not been interrupted.
- Receipts for equipment, inventory, other insured items.
- Record of extra expenses incurred after the disaster, and of shipments received or sales made after the disaster.

Critical Telephone Numbers Form

You will use this form to list telephone and/or fax numbers for your business that are critical to your survival.

Seamless communications with your employees, suppliers/vendors, key contacts and customers following a disaster is important to your survival and continuing viability. Telephone and fax lines are one means of maintaining this communication link.

Your employees will want to get updated information about when and where they should report to work and the status of recovery. You could set up a special number for them to call to receive instructions by way of recorded message. You could also enlist the help of an out-of-province message line or contact person/company for employees to leave an "I'm okay" message and their contact information. An out-of-province number may be more accessible than in-province numbers.

You also will need these phone and fax numbers so you can communicate with your suppliers/vendors, key contacts and customers, to keep them informed about your status and future plans. One solution is to plan ahead to have your telecommunications service provider reroute your telephone and fax numbers to your recovery site.

If you need a phone number for dial-up Internet and e-mail access, be sure to include that.

Also, think about alternative forms of communication should phones not be working, especially to keep in touch with your employees. In anticipation of a break in all phone service, including mobile phones, you might invest

in some simple two-way radios and pagers. Another alternative is to have designated people meet at a prearranged location, assuming it is accessible.

You should list all critical phone and fax numbers, enter what each is used for and think about whether it is essential that this number be continuously available. Then, select a solution for how to keep the number operational or decide on an alternative to meet the need. Consider listing all these critical numbers in your mobile phone or Personal Digital Assistant (PDA) so you have them readily available. Be sure to inform your employees of any changed procedures.

Critical Supplies Form

You will use this form to list supplies needed to fulfill your critical business functions.

Critical supplies include items that are necessary to keep equipment or work processes functioning, e.g. special fluid for a machine, forms, and cheques. Be sure to list all information that is pertinent to order each supply, such as an order number. Plan ahead with your vendors to determine costs and delivery times for these essential items and parts. Include sufficient space at your recovery site for storage.

In addition, consider storing some essential supplies (particularly those items needed to fulfill a critical business function) in an accessible place outside your building in case you need them immediately and cannot re-enter your building after evacuating it.

Note: Do not include office supplies, e.g. paper, mail bins, filing cabinets and other items needed for a recovery location. These will be listed in Miscellaneous Resources.

Equipment / Machinery / Vehicles Form

You will use this form for equipment or machinery that is necessary to keep your business operational or that would severely curtail operations if it failed. List anything that plugs in, as well as tools and spare parts vital to the operation of your equipment or machinery. You may also want to include company-owned vehicles.

You should explore rental options to replace damaged equipment or machinery during the time it is being repaired or replaced and request written estimates of rental, set-up, shipping costs and delivery times. This is particularly important if you rely on equipment that is highly specialized or difficult to replace. Be sure to add rental companies you have contacted to your Suppliers/Vendors form.

Don't forget your cars/trucks. Plan to protect them, but also have alternate plans to meet your essential transportation needs.

Consider special protection for key tools or small equipment, such as storage in foam-padded storage containers when not in use, preventing damage by accident or during an earthquake. Additional protection for larger valuable, hard-to-replace equipment or machinery is also advisable.

Check your contents insurance to determine whether it covers the replacement cost of critical equipment or machinery.

Note: Computer equipment should be listed in the Computer Equipment and Software form; telecommunications equipment in the Telecommunications form; and office furniture for your recovery location in the Miscellaneous Resources form.

Computer Equipment and Software Form

You will use this form to list the computer equipment, hardware and software you will need to fulfill your critical business functions.

Business interruption—the result of a natural disaster, power outage, cyber crime, or any other cause—can be devastating, the result of a natural disaster, a power outage, cyber crime, or any other cause. Without access to data and information, business operations can come to a standstill. You might want to consider the services of a data centre and disaster recovery facility, where your data is backed up on a regular basis and available to you if your normal business operations are interrupted.

Most businesses are dependent on computers, utilizing desktop and laptop computers and computer networks. Most communicate with or conduct business with their vendors, customers, partners and clients through the Internet. E-business is a rapidly growing segment of the economy. If your company does the majority of its work online, be sure your computer security is current.

If you go to a recovery location, it is likely you will need to lease or purchase computer equipment and replace your software. You may use this form to list what you would order.

When there is sufficient warning about an event, such as a hurricane, you might decide to move some of your computer equipment and software to a safe place, so that it could be utilized at your recovery location. In addition, you could require that all employees take their laptops

with them, in order to provide the option to work from home or at a recovery location. Be sure to specify these preferences on the form.

Some disasters occur without warning, though, so you want to be sure you have alternatives available. Other reminders:
- Keep a backup copy of your computer's basic operating system, boot files, and critical software, and be sure you have copies of your operations manuals.
- Maintain an up-to-date copy of computer and Internet logon codes and passwords.
- Make arrangements with computer vendors to quickly replace damaged vital hardware and software, and/or to meet your needs at your recovery location.
- Request written estimates for rental or purchase, shipping costs and delivery times, if relevant. Be sure to list these companies in your suppliers/vendors form as either primary or alternate vendors.
- Elevate computer equipment normally stored on the floor, e.g. CPU's, and secure in place when flooding is a possibility.

Remember that you should always keep your computer hardware and software licenses up to date.

Voice/Data Communications Form

You will use this form to list your voice and data communications needs. Examples of voice communications include modem, voice mail, Private Branch Exchange (PBX)/Automatic Call Distribution (ACD), and standard telephone. Examples of data communications include cable, DSL or dial-up for Internet and e-mail access.

Communication with employees, vendors, customers, emergency officials and other key contacts is vital to your ability to resume business operations following a disaster event.

Voice and data communications equipment is only a part of a larger communications plan. One of your *critical business functions* should be "*Communication Internal*"and another should be "*Communication External*", so you can notify your suppliers/vendors and key contacts, including your customers,of the status of your business. This plan should include media relations, too.

Due to the possibility that demand for phone service may overwhelm the system, you should consider the following

safety nets or alternatives as ways to communicate with your employees, vendors and/or customers:

- Designate one remote voice mail number on which you can record messages for employees
- Arrange for programmable call forwarding for your main business line—if you cannot physically access your business, you can call in and reprogram the phones to ring elsewhere. (Keep in mind that if telecommunications engineers are swamped with requests to redirect phones, faxes and data lines to backup locations, your recovery location could be affected.)
- In anticipation of a break in all phone service, including mobile phones, you might invest in some simple two-way radios and pagers.
- Communicate by e-mail, postings on your website, or an emergency messaging system.

As you think about your voice communication needs at your recovery location, determine whether you need speakerphones, voice mail capacity or the ability to record conversations. Also, decide if you need a conference bridge, in order to have conference calls with employees, key contacts, and/or customers to assess disaster damage and to make recovery decisions.

Reminders:

- "Plain Old Telephone Service" (POTS), where the handset is connected to the base, will likely work during a power failure. The connection is direct to the telephone company, which has extensive back-up power, while cordless phones rely on electricity on site and may be useless.
- Mobile phones may work if cell towers are still functional, but often system overload causes lost connections.
- A power surge through a telephone line can destroy an entire computer through a connected modem. You may want to invest in a battery backup with surge protection for all computer and phone equipment.

Miscellaneous Resources Form

You will use this form to list the basic items needed to make your recovery site operational, such as office furniture, safes, mail bins, etc.

Disaster Response Checklist Form

When disaster strikes, you may be on your own for hours or even several days. Emergency services may not be able to respond right away. The checklist includes supplies to help you take care of your employees, your customers or others on your premises until help arrives. Your Key Contacts will include emergency services you may need, such as fire department, emergency management agency, Canadian Red Cross, etc.

You should be able to put the basic disaster supplies together for under $100. One major purchase (more than $500) you should consider is a multi-KV generator, pre-wired to the building's essential electrical current, which you can operate during a power outage. See the "What About Costs?" section for a more detailed discussion of costs.

Do your employees know about your emergency plans?

Meet with your employees at least once a year to review emergency plans. Make sure they know how to evacuate the building safely in an emergency and how to protect themselves and your customers in case of an earthquake or other disaster. Consider First Aid, CPR and other emergency training for your employees.

Also do mock disaster drills. In addition to ensuring that employees know how to safely evacuate the building, make sure they know where to meet, to whom to report, when to leave the designated meeting place, and how or where to make contact should they fail to get to the meeting place. Designate one employee from each work shift as safety coordinator to communicate these details, oversee the evacuation, and account for all employees.

List emergency phone numbers such as fire department, police department, ambulance service, and emergency management agency in a highly visible place.

Are your employees prepared at home?
Your employees are your most important asset. They will not be able to return to work to help your business resume operations unless their family needs have been met.

Encourage employees to develop and exercise family disaster preparedness plans. Provide information to employees on how to protect their property and contents/possessions. For more information, go to www.ICLR.org

Business Continuity Forms

Contact Information

The first three (3) forms will help you collect all the pertinent information that you'll need to reach your employees, suppliers/vendors, and key contacts in the event of a disaster.

Tips:

- E mail the Employee Contacts form (download from www.ICLR.org to each of your employees. Ask them to fill out all the information they can supply and e mail it back to you. This will significantly reduce the time it will take to finish this portion of your plan.

- You can also e mail the Key Supplier/Vendor and Key Contacts forms to the respective companies and ask them to fill them out. Keep in mind, these forms may require that you fill in some fields yourself.

- Be sure to keep these forms current by updating them periodically.

Employee Contact List

Use this form to gather information on employees (and the business owner) so that each person can be contacted at any time or place. After you have entered all your employees, assign a number to *Call Order* for each employee. You may choose to sort your employee list alphabetically or by call order.

Maintain an up-to-date copy of contact information for each employee in an accessible and secure location.

Save a blank version of this form so you can make additional copies as needed.

Notes: _____

Use this form to record information about your current suppliers and ones you could use as an alternate choice.

Disaster-induced operational problems are not always connected to property damage. They include disruptions in the flow of supplies and in the ability to ship goods or deliver services. Your ability to resume operations also relies on the ability of your suppliers to deliver what you need on time.

Save a blank version of this form so you can make additional copies as needed.

_____

Use this form to list the key contacts for administration of your business. Key contacts consist of those you rely on for administration of your business, such as your bank, creditors, insurance agent/broker/company, accountant, etc. They also include services in the community you need to help you resume operations, such as utilities, emergency responders, media outlets, business partners and business organizations.

Your key customers are an essential part of this list. If you have more than 20 key customers, you should use the *Vital Records* form instead of listing each one here to avoid making your business continuity plan too bulky. Nevertheless, you still may want to include some of your major customers or clients in *Key Contacts*, as they could be involved with one or more of the critical business functions you identify for your recovery plan.

Save a blank version of this form so you can make additional copies as needed.

Business Operation

The following six (6) forms will assist you in organizing your business continuity plan. What business functions will need to be performed right away and which functions can wait until you are back up on your feet? Where will you go if your primary place of business is inaccessible? Where are all your important records stored and are there backups available? How will your employees, key suppliers/vendors, key contacts and customers reach you if your primary source of communication is down? What machinery and equipment will you need to perform your critical business functions? What critical supplies will you need to fulfill those same functions?

Tips:

- E mail copies of each of the forms to section managers in your company or appoint leaders from different divisions to fill out the forms that are applicable to their section.

- Remember that if you create alternate telephone or fax lines, you'll need to get the word out to your key contacts, suppliers/vendors, and key customers. You can do this through e mail, personal phone calls, signage, local newspapers, etc. You'll want to inform those with whom you do business that you're still open for business!

- Consider using a keychain flash drive or a CD Rom, kept in your car CD case, as one of the backup strategies for your vital records and/or information essential for your business' success. Always be sure your backup information is secure in case of loss or theft, possibly by purchasing a password protection program.

Use this form to identify what business functions are critical to your survival. To help you get started, the following are some key questions to ask yourself:

- What are my most critical and time sensitive business functions?
- Which functions would I classify as highest priority? Medium priority? Lowest priority?
- How much downtime can I tolerate for each business function?
- Which business functions are necessary to fulfill my legal and financial obligations and maintain cash flow?
- Which business functions are essential to maintain my market share and reputation, or to strategically adjust to changed circumstances?

Save a blank version of this form so you can make additional copies as needed.

Recovery Notes: _____

_____

Use this form to provide information on your recovery location(s), that is, where you will conduct business operations following an event. It could be at an alternate site, at a similar business through a mutual aid agreement, your own home, or if you are location dependent, at your primary place of business. You may require more than one location depending on a variety of factors including departmental needs, number of employees, etc. If you identify more than one recovery location, be sure to clearly name each one in the *Recovery Location* field.

Note: If you have not secured your recovery location(s) at the time you are starting to develop this business continuity plan, continue on with the planning process. When you have finalized all arrangements for the recovery site(s), return to this form to enter the appropriate information.

Save a blank version of this form so you can make additional copies as needed.

Can the record be recreated?	☐ Yes	☐ No

Recovery Notes: _____

_____

Critical Telephone Numbers

Use this form to list telephone and/or fax lines that are critical to the survival of your business. Enter what each is used for and think about whether it is essential that this number be continuously available. Then, select a solution for how to keep the number operational or an alternative to meet the need.

You may want to have a plan in place to communicate any contact information changes to your employees, vendors and key contacts.

Save a blank version of this form so you can make additional copies as needed.

Phone Number	Type (Enter Code) L Local LD Long Dist. 800 Toll Free F Fax M Mobile O Other	Status (Enter Code) C Currently in use E Will establish during recovery	Description (e.g. hotline, main line, toll free customer service line, dial-in to network)	Solution (Enter letter) Reroute to recovery location New Number Recorded Msg Other (Explain)	Related Business Function(s)

Recovery Notes:

_____

_____

Use this form to list supplies needed to fulfill your critical business functions. A critical supply is any item essential to keep equipment or work processes functioning, e.g. special fluid for a machine, special forms and/or cheques. Be sure to list an order number.

If you do not have the supplier recorded on the supplier/vendor form, go back to the form to add the information.

Note: Do not include basic office supplies, e.g. pens, paper, stapler. Do not include office furniture either, e.g. filing cabinets, mail bins, desks or chairs, as they all should be listed in *Miscellaneous Resources.*

Save a blank version of this form so you can make additional copies as needed.

_____

Equipment/Machinery/Vehicles

Identify the key equipment/machinery necessary to perform your essential business functions,i.e. the equipment or machinery that would shut you down or severely curtail production of goods or services if it failed. This could include tools and spare parts vital to operation of equipment. You may also want to list company-owned vehicles.

When there is adequate warning about an event, such as a hurricane, you might decide to take some of your equipment or machinery that can easily be moved to a safe place, so that it can be used at your recovery location(s). For such instances, you would want to list equipment or machinery you currently own or lease. Some disasters occur without warning, though, so you want to be sure you have alternatives available. Review the Property Protection Plan beginning on page 30 to find suggestions on how to protect your existing machinery.

Note: Computer equipment should be listed in the *Computer Equipment and Software* form; telecommunications equipment in the *Voice/Data Communications* form; and office furniture for your recovery location in the *Miscellaneous Resources* form.

Save a blank version of this form so you can make additional copies as needed.

Alternate Supplier/Vendor: _____

Recovery location for installation: _____

Order time for replacement: _____

Recovery Notes:
_____
_____

Office Setup

The last three (3) forms are designed to help you set up your recovery location quickly. You'll be asked to list the Computer Equipment and Software, Voice/Data Communications, and basic office supplies (Miscellaneous Resources) that you'll need to resume your business operations.

Computer Equipment and Software

Use this form to list the computer equipment, hardware and software you will need to fulfill your critical business functions.

If you go to a recovery location, it is likely you will need to lease or purchase computer equipment and replace your software. You may use the form to list what you would order, and in the *Title & Version or Model No.*field write "Unknown," or similar words, if you do not yet have that information. Be sure to explain in *Recovery Notes*. The important thing is that your final plan includes what you need to perform your critical business functions.

If you plan to order multiple items of the same type—e.g. keyboards or monitors—you can condense the information into one record. You can list relevant details in *Recovery Notes*.

When there is sufficient warning about an event, such as a hurricane, you might decide to move some of your computer equipment and software to a safe place, so that it can be utilized at your recovery location. For such instances, you want to list equipment you currently own or lease and/or software that you would take, and in the *Status* field check "Currently in use." Some disasters occur without warning, though, so be sure you have alternatives available.

If you currently own/lease the item, choose the supplier(s)/vendor(s) based on which one(s) you would use to replace the item if it were damaged in a disaster. It is always advisable to have an alternate vendor, though, in case your primary vendor is not available.

Save a blank version of this form so you can make additional copies as needed.

Open for Business™
Voice/Data Communications

Use this form to list your voice and data communications needs. Communication with employees, vendors, customers, emergency officials and other key contacts is vital to your ability to resume business operations following a disaster event. This form should be used to determine what telecommunications equipment you need to help you with that communication.

If you go to a recovery location, it is likely you will need to lease or purchase telecommunications equipment. You may use the Voice/Data Communications form to list what you would order, and in the *Description & Model No.* field, write "Unknown," or similar words, if you do not yet have that information. Be sure to explain in *Recovery Notes.*

If you plan to purchase or lease multiple items of the same type—e.g. telephones—you can condense the information into one record. List relevant details in *Recovery Notes.*

Save a blank version of this form so you can make additional copies as needed.

Open for Business™
Disaster Response Checklist

When disaster strikes, you may be on your own for hours or even several days. Emergency services may not be able to respond right away. Check which supplies you have on hand to help you take care of your employees, customers or others on your premises until help arrives. Be sure to purchase the remaining supplies so you are ready when an emergency occurs. Check your kit every six months to replace expired or outdated items.

Save a blank version of this form so you can make additional copies as needed.

o **Working smoke detectors and fire extinguisher**
Set a schedule to test smoke detectors annually and keep extra batteries on hand. Check the pressure indicator of your fire extinguisher monthly.

o **First Aid Kit**
Include scissors, tweezers, a variety of Band-Aids, gauze pads/roller gauze and tape, anti-bacterial wipes, first aid ointment, vinyl gloves, first aid book, and any other items you deem essential. Remember your kit is for "first" aid, not ongoing care.

o **Medications And Personal Items**
Remember that you may not have access to pharmacies or doctors. Suggest that employees store a one-week supply of prescription and over-the-counter medications at their workspace, along with any instructions for taking them. Encourage employees to keep their doctors' contact information close at hand, along with a list of any prescription medications and dosages they are currently taking. Employees might also choose to store an extra set of glasses and/or contact lenses and solution, batteries for hearing aids, walking aids, feminine and personal hygiene items, and any other personal items they may need.

o **Flashlights And Light Sticks**
Keep flashlights and extra batteries in easy to find locations. Non-toxic chemical light sticks can be taped next to light switches for emergency use.

o **Battery operated or wind-up AM/FM radio**
Maintain a current list of stations in your area that provide emergency updates and that have generator backup to support continuous broadcast. Keep extra batteries on hand orconsider a wind-up radio (wind one minute for 30 – 35 minutes of play).

o **Bottled Water**
Have at least one gallon of water per person per day, to be used for drinking, personal hygiene and cooking. Store in sizes that are easily transportable, should you need to relocate.

o **Nonperishable food and utensils**
Stock a supply of non-perishable food such as peanut butter, crackers, ready-to-eat canned meats, beans, fruits and vegetables, comfort/stress food such as cookies and hard candy, canned juices, powdered milk, etc. Be sure to have a manually operated can opener and plastic utensils.

o **Paper supplies**
Keep a supply of toilet paper, tissues, paper plates, napkins, and towels on hand. Also have note pads, markers, pens, pencils,

o **Tools and other supplies**
Keep supplies of items such as duct tape, waterproof plastic sheets, shut-off wrench for water and gas, whistle, compass, plastic bucket with tight lid, work gloves, pliers, hammer, plastic garbage bags and ties. A pry bar, shovel, dust masks, eye protection, and a push broom will aid in clean-up operations

o **Blankets**
Keep a supply of blankets, pillows if available, cots or mats for sleeping/taking breaks.

o **Camera**
Have a disposable camera, or a camera with extra batteries and film, available to record damage.

o **Cash and ATM/credit card(s)**
Keep enough cash for immediate needs, and ATM and credit card(s) for emergency use (dependent on electric power availability).

o **Emergency Contact List**
Maintain a current emergency contact list for employees and emergency services, such as police, fire and utility companies. Keep in several places, eg. a Personal Digital Assistant (PDA), PC at home, or a trusted neighboring business.

Incident Response, Recovery & Restoration

☐ **Move to a safe place**

Leave building

> If a partial or complete building evacuation is required, employees will quickly move to their pre-planned meeting points out of doors. Conduct a roll call and report missing employees (and visitors).

Shelter-in-place

> A severe thunderstorm, tornado or terrorist incident may dictate that employees seek safety in interior sections of the facility.

☐ **Determine the type and extent of the incident**

- o What happened?
- o When did it happen?
- o What was the suspected cause?
- o What is the civil authority response?
- o When can you have access to the building?
- o What are the security issues?
- o What can you do to avoid additional damage?

☐ **Alert employees.** Notify employees of the incident, its impact, and what you want them to do. (It may be as simple as "stay at home" until further notice.)

☐ **Activate Business Continuity Plan**

☐ **Manage the incident**

- o Gather your resources
- o Prepare your alternate site (if appropriate)
- o Activate your critical business functions/procedures

☐ **Restore your business**

> When you have resumed business operations—that is, you have recovered your critical business functions—take steps to fully restore your business.

☐ **Debrief**

> Learn from the business interruption. If needed, modify your business continuity plan to be better prepared for the next incident.

Property Protection Checklist

Protecting your building and its contents

Open for Business™
Property Protection Checklist

The following checklist is designed to help you look for items that have an important bearing on the safety of your building, and to protect your building and its contents from damage. It is not meant to be an all-inclusive list of how to protect your property from damage in the event of an earthquake, wind (hurricane, high winds, tornado/hail), flood, wildfire or freezing weather occurrence, but it contains key elements for disaster resistance.

Though building owners have more control over their property than renters, business tenants have many of the same concerns, as the issues are virtually the same whether the occupants own the building or rent space in it. Renters may want to discuss items with their landlord or building manager.

The checklist can serve multiple purposes. In addition to giving you an idea of steps for improving building security, the checklist can be used to guide decisions regarding building upgrades and maintenance. Replacement windows and doors, materials for a new roof and other items can have a big impact on building integrity and building safety. These checklist items are also useful for businesses that are considering buying or leasing new space. Reviewing the checklist as you inspect a piece of property may help you decide where to locate.

Regular checks and maintenance of the building exterior and major mechanical components, such as heating and cooling equipment, are important no matter where a building is located. This keeps small problems from becoming big ones, while ensuring building integrity.

For more detailed information about property protection, go to www.ICLR.org

In earthquake areas

Earthquake Risk Assessment

The following building characteristics describe the types of building configuration or features that can make your building *less* vulnerable to earthquake damage. This does not mean, however, that there is a low risk of earthquake damage.

Additional risk may be imposed on a building due to its irregular features, presence of brick veneer, and vulnerable foundation types. Characteristics that could make your building more vulnerable to earthquake damage may not be so significant if your building was designed by a professional engineer and in such a way that the following characteristics are present.

- ❖ A simple building design. A box-like building is generally more stable than an irregularly shaped building, or a building with multiple stories that vary significantly in height. One example of this is when a multi-story office building has a grand entrance on the first floor with raised ceilings.

- ❖ A roof that has no openings, such as for access doors or skylights, or only openings with a dimension less than 12 feet or less than 50 percent of the smallest roof dimension. Large openings can weaken a roof.

- ❖ Light roofing materials, such as asphalt shingles and metal panels or tiles. The use of relatively light roofing materials will help keep the building's center of gravity low, thereby improving its performance and reducing the likelihood of damage during an earthquake.

- ❖ Absence of a large garage door, first story parking, or other large ground floor openings in multiple-story buildings. Presence of these features increases earthquake damage risk.

- ❖ Absence of brick or stone veneer on the exterior of the building. Not only are brick and stone veneer cracked and easily damaged in an earthquake, but they also introduce extra loads into the exterior walls—above and beyond the forces they would otherwise have to carry.

❖ Strong structural foundation. The foundation of a structure plays a crucial role in the structure's performance during an earthquake. There are several types of foundation systems. The first is a foundation system built directly on the ground as a slab-on grade system. The other three examples are of foundation systems where the bottom floor is elevated above grade.

The first two types are the most resistant to earthquake damage.

The foundation types are

- o slab-on-grade with integral footing (the footing and slab are a single unit).
- o crawlspace or basement foundation wall system consisting of a continuous concrete or reinforced masonry wall system.
- o crawlspace or basement foundation wall system consisting of a wood stud cripple wall or unreinforced masonry wall.
- o pier or pile foundation system consisting of wood, concrete, or steel.

Note: A professional engineer should always be consulted when any structural improvements are being considered.

Refer to the following checklist for additional actions that should be taken—regardless of your building's configuration—to protect your employees, customers and visitors, as well as your building, contents and inventory.

Check for:

- Windows, skylights and doors with either tempered glass or safety film applied on the interior side of the glass, to reduce the chances of the glass shattering. Check for etching in the corner of the window that says "tempered" or "laminated." Safety film is an adhesive film applied to the inside of the glass.

- Natural gas lines with flexible connections and an automatic shut off valve. A flexible gas line is not rigid. It is made of a material such as rubber or plastic that you can bend yourself. This reduces the chances of the line rupturing, resulting in a fire. The automatic shut off valve is typically installed near the gas meter.

- Flexible supply line to toilet(s).

- Flexible couplings on fire sprinkler system.

- Major appliances, such as boilers, furnaces, and water heaters, braced to the wall and/or floor such that the appliance will not overturn or shift in the event of an earthquake.

- Hangers (usually strips of sheet metal or stiff steel rods) less than 12 inches long that support your mechanical and plumbing systems. Longer hangers may allow too much sway during a tremor.

- Computer and other electronic equipment secured to the floor or desk with braces, Velcro, or some other means of attachment, so it will not overturn.

- Suspended ceilings braced to the structure to limit the amount of displacement during an earthquake.

- File cabinets with locks or latches that must be released manually in order to open the drawers. Locks or latches will keep cabinet drawers from swinging open during an earthquake and spilling contents.

- Cabinets, bookcases and storage racks secured to the walls and/or floor, to keep them from tipping over.

If you are in an earthquake area, consider adding earthquake coverage to your insurance policy.

In windstorm areas (hurricane, high wind, tornado/hail)

Check for:

- Roof condition. A roof in good condition has all metal flashing secured to the structure and free of rust, preventing uplift and peeling off of roof coverings. Roof coverings are secure and show no signs of weather damage (cracking, rust, punctures, etc.). All vents and other roof penetrations are flashed and sealed, and all roof equipment is bolted down. The roof drainage system is working properly, with no "ponding" of water. There are no leaves or other debris blocking drainage.

  o On asphalt shingle roofs, shingle tabs that overlap and adhere to the shingles below. Loose shingle tabs can be fixed by applying a dab of asphalt cement on their underside.

  o If you have a low slope roof ("flat roof"), and/or a steep slope roof with any kind of roof covering other than asphalt shingles, have a roofing consultant evaluate your roof's condition to determine if there is a need for repair or replacement.

Re-roofing in hail-prone areas:

  o If you plan on using asphalt shingles, metal roofing, wood or tile, consider an impact resistant product.

Re-roofing in hurricane or high wind areas:

  o If you plan on using asphalt shingles, consider using a wind-resistant shingle.

- Roof-to-wall straps, brackets, or other connectors that attach each rafter or roof truss (whether wood or light frame steel) to the wall, to keep the roof from blowing off the building.

- Carports, canopies, and/or overhangs secured to the structure with rust-free anchors and tightened bolts/nuts.

- Signs, vent stacks, rooftop mechanical equipment and other vertical projections secured to the structure or the site foundation with rust-free anchors, tightened bolts/nuts, guy wires, or other secure methods— *do not use sheet metal screws alone.*

- Exterior windows and doors with a minimum design pressure rating of 50 pounds per square foot. Look for a label or sticker in the corner of the glazing or inside the frame itself or contact the window/door manufacturer.

- Exterior doors with a deadbolt and supported by at least three hinges. In general, the more hinges your doors have, the more wind resistant they are. A deadbolt latching mechanism adds to wind resistance and security.

- Exterior double doors with head and foot bolts on the inactive door, or another method of securing the door, such as locking it into a mullion/center post.

- Impact-resistant windows and doors. Look for a sticker or label in the corner of the glass or frame itself, indicating it meets one or more impact-resistant standards.

- An exterior lightning protection system. Look at your roof to see if there are metal rods or probes. The lightning protection system needs to be securely anchored to the roof. Otherwise it may whip around in a storm and damage the building.

- Surge protectors on all computer systems, telephone lines, and other electronic systems, to protect against lightning damage that often occurs in windstorms.

In wildfire areas

Wildfire Risk Assessment:

Wildfire is a potential risk everywhere. Wildfire danger occurs where there is a wildland/urban interface— that is, wherever buildings are nestled among trees and other combustible vegetation such as grasses, brush and shrubs. Whether near large urban areas or remote rural locations, interface areas exist all over the country. Determine how much you are at risk by reviewing the factors listed below. Then continue with the wildfire checklist for additional actions to take to protect yourself from wildfire.

Your risk is the *highest* if:

o   there is a history of nearby wildfires;

o   you are in a climate with a dry season of more than 3 months;

o   there is wildland within 100 feet of your building;

o   there is steep forested terrain with grades that average over 20 percent in any direction from the building;

o   there are other fuel sources (wood piles, brush, furniture) less than thirty feet from your building;

o   you are in a rural area;

o   the nearest fire hydrant is over 500 feet away;

o   there is limited access for fire trucks.

Ideally, the nearest fire hydrant should be less than 300 feet away. If there are no fire hydrants in the area, firefighters must truck in water or pump it from a pond or other water source. As a result, the building has a higher fire risk.

Check for:

- "Survivable" space around the building. This is space that is cleared of brush and other fuel sources and maintained so that a wildfire will not spread to the structure. The survivable space recommendations are: 30 feet in low-risk fire areas, 50 feet in moderate-risk areas and 100 feet in high-risk areas. Survivable space should be increased on any side where there is a downward slope away from the building, and if the exterior of the building is combustible.

- Fire-rated roof coverings provide the best protection for a business during a fire.

- Eaves enclosed with fire resistant materials and screens over soffit vents. Fire resistant materials include aluminum or other metals and plywood ½ inch or greater thickness. Combustible materials include vinyl, PVC, and plywood less than ½ inch thick.

- Attic, crawlspace and/or foundation exterior vents of non-combustible materials (e.g. aluminum, other metals, or plywood ½ inch or more thick). The vents should be less than one foot by one foot and covered with non-combustible screening with openings of ¼ inch or less. This prevents sparks from entering your building.

- Exterior walls covered with a non-combustible siding/veneer. Examples of non-combustible siding include stucco, brick veneer, and concrete block. Examples of combustible siding/veneer include vinyl siding and wood veneer.

- Double-pane tempered glazing filters out extreme heat better than single pane or non-tempered window glazing. Check for etching in the corners of your windows that says "tempered" or "laminated."

- A monitored smoke alarm system, to automatically alert the local fire department if fire breaks out.

- A fire sprinkler system, to automatically start fire suppression.

- Underside of above-ground decks and balconies enclosed with fire resistant materials. Examples of fire resistant materials include aluminum, stucco, brick veneer, concrete, and plywood greater than ½ inch thick.

- Address numbers that are non-combustible, at least 4 inches, reflectorized, on contrasting background, and visible from the road from both directions of travel. Address numbers must be easily viewed from the road so firefighters can find your building.

- Access route with a minimum width of 12 feet with at least 13 ½ feet of vertical clearance near the structure. The main approach to your business must be large enough for a fire truck to have easy access in the event of a fire.

In freezing weather areas

Check for:

- A secondary moisture barrier that extends from the edge of the eaves to at least 24 inches beyond the inside of the exterior wall, if the roof is sloped. Heat that escapes into the attic space warms the underside of a sloped roof, causing snow to melt and then refreeze when it reaches the roof eave, outside the area of warmth. Moisture barriers prevent melted snow that backs up underneath the roof covering from entering the building.

- No attic or mechanical room with heat sources directly under the roof. Heat sources directly beneath a roof can cause ice damming and water backups.

- Sealed and insulated recessed light fixtures that may be installed in the ceiling immediately below the attic space or mechanical room. This keeps heat from melting snow on the roof, causing water backups.

- Attic penetrations properly sealed and insulated to prevent heat intrusion into the attic.

- Access doors to attic space or mechanical room properly insulated, weather-stripped or sealed with a gasket to prevent heat intrusion into the attic.

- Insulation installed over water or sprinkler supply piping located in exterior walls, unheated drop ceilings, or other unheated spaces, to prevent frozen or burst pipes.

If space is unoccupied for more than 24 hours (e.g. holidays, vacation, weekends, etc.) during the winter months, arrange to have someone inspect the pipes daily to catch signs of freezing that could lead to burst pipes and extensive water damage.

Open for Business™
Additional Resources

As you work on your plan, you may find you need to expand some existing sections to conform to your needs or add additional information beyond what the *Open for Business™* toolkit contains. You should always continue to educate yourself on disaster-preparedness techniques. Check the resources listed below for more information about implementing disaster safety recommendations.

<u>**Nonprofit and Professional Associations:**</u>

What About Costs?

A small business owner is always mindful of costs when developing any strategic plan, including a property protection and business continuity plan. This list will give you some idea of the costs you will encounter when putting together your property protection/business continuity plan. The costs either reflect purchases of materials/goods or the value of staff time beyond what would be considered an integral part of the employee's job functions. The costs also consider hiring an outside contractor.

No Costs
- Identify two or three contractors or supply sources for emergency plywood window coverings.
- Calculate the cost of business interruptions for one week, one month and six months.
- Ask your insurance company or agent/broker about policy coverage and prices.
- Write a short checklist of recovery action items for your firm.
- Maintain a current emergency contact list for employees and emergency services, such as police, fire and utility companies.
- Write a checklist for how to stay abreast of possible flood watches or warnings.
- Keep your building's flood vents clear of debris or other blockage.
- Check with your local fire department to determine wildfire risk at your location.
- Instruct employees about your company's emergency plans, including evacuation plans and "rally point" in the event of disaster.
- Identify how employees can be contacted if the phone service is disrupted.
- Keep some cash and an ATM card or credit card on hand.

Under $100
- Purchase a First Aid kit.
- Purchase and store bottled water for emergency use (two days minimum).
- Stock a supply of non-perishable foods, paper plates, napkins, and plastic utensils.
- Purchase a weather alert radio.
- Buy a stock of flashlights, batteries, pens, paper, paper towels, packing tape, etc. for disaster kit.
- Keep supplies of items such as duct tape, waterproof plastic sheets, shut-off wrench for water and gas, whistle, compass, plastic bucket with tight lid, work gloves, pliers, hammer, plastic garbage bags and ties.
- Purchase/maintain camera and film.
- Purchase a battery operated or wind-up AM/FM radio .
- Purchase a fire extinguisher.
- Restrain desktop computers, compressed gas cylinders and other small items from earthquake shaking.
- Elevate valuable contents on shelves above base flood level.
- Apply asphalt cement under tabs of loose shingles.
- Caulk/insulate around openings in outside walls, roof and attic.

$100 - $499
- Provide First Aid and CPR training for employees.
- Purchase all items listed in the Disaster Supplies Checklist in *Open for Business*^{TM}.
- Purchase a *small* back-up generator and maintain fuel.
- Maintain your sump pump, if you have one, or purchase one.
- Purchase plywood, and make up and label shutters. Install permanent anchors to allow quick and secure anchorage of shutters.
- Brace major appliances, such as water heaters and furnaces to the floor or wall, in earthquake areas (cost covers materials and contractor).

More than $500
- Purchase and install a multi-KV generator, pre-wired to the building's essential electrical circuits.
- Purchase removable shutters that meet code debris impact requirements and have anchor systems professionally installed.
- Install permanent shutters (roll down, accordian, etc.) for windows or retrofit the windows to enhance their resistance to wind-borne debris.
- Re-roof with an impact resistant roof covering.
- Install high wind connectors in roof system (cost covers materials and roofing contractor).
- Re-roof with Class A fire resistant roof covering in wildfire prone areas.
- Hire an engineer to evaluate the building's wind or seismic resistance.
- Conduct a one-hour drill simulating the occurrence of a tornado, flood, or other hazard.
- Send the key safety/emergency response employee to several days of training or conferences.
- Purchase additional insurance (business interruption, loss of income, extra expense, flood, earthquake).
- Store duplicate records off site at a secure facility.
- Store data at a data center and disaster recovery facility.
- Purchase a removable computer storage device; store data off-site.
- Establish a voice communications system to meet your emergency needs, e.g. voice-mail, conference call capability, Private Branch Exchange (PBX)/Automatic Call Distribution (ACD) system.
- Install a monitored smoke alarm system.
- Install lightning protection system.

Conclusion

Your business means jobs for local residents and security for their families. It means a sound tax base for local government. It means a healthier local economy. In short, it means more than just your investment, although that alone is important enough.

When you protect your business from natural disasters, or from any kind of significant business interruption, you are also protecting one of your community's most valuable assets. You may not be able to prevent a natural or human-caused disaster from occurring, but you can take action to avoid the most devastating damage that your business may face.

Once you have created your business continuity plan and completed your property protection checklist, be sure to maintain them so all information is current. Keep employees updated on their responsibilities and test the business continuity plan periodically.

Open for Business™
Post-Planning Feedback

What do you think of *Open for Business™*? Your feedback will help us to improve the toolkit for future use. Please take a moment to answer these few questions and mail this form back to us.

Remember, you can always find the most updated version of the entire *Open for Business™* document, including the Business Continuity Planning forms, the Property Protection Checklist, this feedback form, and additional property protection guidance at www.iclr.org.

Encourage other small businesses to complete their plan. Submit your story to *twaddington@iclr.org*

* * * * * * * * * * * * * * * * * *

1. How did you learn about *Open for Business™*?
    _____

2. What kind of business are you?
    o Retail   o Service   o Manufacturing   o Public Sector   o Other/Explain:
    _____

3. How many employees do you have?
    _____

4. Are you considering any actions to prevent or reduce losses (e.g. providing a fire sprinkler or reinforcing building components for high wind)? _____
    _____

5. How many working hours did it take for you to complete the Business Continuity Plan?
    _____

6. Were the instructions in the Business Continuity Plan clear? What can we do to make them clearer?
    _____

7. What items would you suggest adding, removing or changing in the Business Continuity portion of the plan?
    _____

    In the Property Protection portion of the plan?
    _____

8. What items in *Open for Business™* were most useful for you?_____
    How/Why? _____
    _____

9. Are there any items or topics you'd like to see added to the materials? Do you have any other suggestions for improvements? _____
    _____

10. Have you recommended that *Open for Business™* be used by others? Explain:_____
    _____

A Partnership of the
Perth County Emergency Management Program
and the Institute for Catastrophic Loss Reduction

Prepared by the Insurance Institute for Business & Home Safety (IIBHS). IIBHS is a nonprofit initiative of the insurance industry to reduce the social and economic effects of natural disasters and other property losses by conducting research and advocating improved construction, maintenance, and preparation practices.
